

Tadreeb Project

A collaborative system designed to connect students with training opportunities.

Team Members: Ammar Alharbi, Thamer Alruqi, and Nawaf Alqarni

تدريـب
PLATFORM

Project Objectives

University Partnership

Establish partnerships with KAU to create a unified platform for internship opportunities.

Training Engagement

Partner with Training Provider to list 1,000+ verified internships nationwide, ensuring quality opportunities for students.

Student Impact

Serve 5,000+ students annually who need mandatory training for degree completion, simplifying their path to professional experience.

Project Goals

Project Scope

Focus

The platform serves students and training providers, enabling a seamless search, application, and communication during the application process the internship lifecycle.

Inclusions

- Internship search system
- Application submission
- Internship rating system
- Dashboard for providers

Exclusions

- Financial transactions
- Remote training content

Stakeholders

KAU University

University requiring students to complete mandatory training. Critical partners for platform adoption and student onboarding.

College Training Supervisor

University departments that promote Tadreeb to students and ensure academic alignment.

Training Providers

Training Providers providing internships and relying on Tadreeb to recruit qualified students. Key contributors to the platform's success.

Students

Primary users of the platform who search for, apply to, and engage with internships.

Training Supervisors

Company mentors guiding students during internships (do not directly use the platform).

Sources of Gathering Data

Training Providers Operations Study

Analysis of how students currently search for cooperative training, how training providers list internship opportunities, and the communication methods used between them. This helps identify inefficiencies, redundancies, and areas for improvement.

User Interviews

Qualitative insights from students about difficulties in finding suitable training opportunities and communication challenges with training providers, including delays in responses and repeated document requests.

Functional Requirements

FR1	Students register and login using their information
FR2	Training providers register and login using training provider information
FR3	The System allows training providers to add opportunities
FR4	The system shows opportunities to students
FR5	The system facilitates applying process
FR6	Rating System Management

Non-Functional Requirements

NFR1	The system shall be available 24 hours a day, 7 days a week.
NFR2	The system shall be able to load at least 100,000 user accounts.
NFR3	The system's search results shall load within 2 seconds.
NFR4	The system shall implement OAuth2 authentication for secure login.
NFR5	Upload files should be in specific extension to be accepted.
NFR6	Automatic database backups shall be performed every 24 hours to prevent data loss.

Use Case: Logging System

User Selection

User selects "Log in" on the platform interface.

Credential Entry

User enters a university or company email address to authenticate their identity.

Verification

System verifies the credentials through a secure authentication process.

Access Granted

Upon successful verification, users gain access to the platform and its features.

Use Case: Adding Opportunities System

1 Add Opportunity Details

The training provider inputs basic opportunity details such as title, duration, date, and deadline.

2 Specify Applicant Properties

The provider defines the necessary criteria for applicants.

3 Show on Opportunity Page

Once the opportunity is complete, it is displayed on the opportunity page for applicants to view.

Use Case: Student Opportunities

Search and Filter

Student searches and filters opportunities based on preferences, requirements, and location.

View Details

Student clicks on an opportunity to view comprehensive information including requirements, benefits, and suggested courses.

Apply

Student submits an application for the selected opportunity through the platform.

Track Status

System changes the state of the application and allows the student to monitor its progress.

Use Case: Applying Process

View Applications

Training provider views all student applications

Filter and Review

Provider filters applications and visits student profiles

Select Students

Provider accepts or rejects students based on qualifications

Notification

System notifies students of application status changes

Use Case: Rating System

Submit Rating

Student rates the opportunity and provides supporting evidence

Public Display

Approved ratings appear on the platform for other students

Admin Review

Admin reviews the rating and supporting evidence

Approval

Admin approves genuine feedback for display

Class Diagram: System Structure

Object Diagram: Real-World Instance

The object diagram provides a concrete snapshot of the system in action, showing specific instances of the classes defined in the class diagram. This visualization helps stakeholders understand how the system will function with real data.

Sequence Diagrams: System Interactions

Sequence diagrams illustrate the chronological flow of messages between different objects in the system, showing how they interact to accomplish specific tasks. These diagrams are crucial for understanding the dynamic behavior of the Tadreeb platform.

Sequence Diagram

State Diagrams:

State diagrams visualize the different states that objects in the Tadreeb system can exist in and the transitions between these states. They are essential for understanding how the status of opportunities and applications changes throughout their lifecycle.

State Diagram (Training Provider Opportunity)

State Diagram (Student Application System)

State Diagram (Rating System)

Activity Diagram:

Activity diagrams map out the step-by-step workflows within the Tadreeb platform, showing how processes unfold from start to finish. These diagrams are valuable for understanding the logical flow of activities and decision points in key system processes.

Activity Diagram (Training Provider Opportunity)

Activity Diagram (Student applying to opportunity)

Activity Diagram (Rating an opportunity)

System Architecture

The system architecture diagram provides a high-level view of Tadreeb's technical components and how they interact. This blueprint shows the platform's structure from a technical perspective, illustrating how different modules work together to deliver the required functionality.

Presentation Layer

User interfaces for students, training providers, and administrators, accessible through web and mobile platforms.

Application Layer

Core business logic handling user management, opportunity listings, applications, notifications, and ratings.

Data Layer

Database systems storing user profiles, opportunities, applications, and all other persistent data required by the platform.

Testing Strategy and Plan

Our comprehensive testing approach ensures Tadreeb delivers a reliable platform

User Registration

Validating smooth onboarding for both students and training providers with proper validation.

Opportunity Management

Testing internship creation, editing, and publication workflows for training providers.

Application Processing

Verifying students can apply and providers can effectively manage incoming applications.

Rating System

Confirming feedback collection and display functions properly across the platform.

Testing Methodology and Test Cases

Black-box Testing Approach: We evaluate the platform through user actions rather than examining internal code structure.

1. **Registration Testing:** Validating user creation with various inputs to ensure proper validation and account setup.
2. **Opportunity Management:** Verifying providers can create, edit, and publish opportunities with required details.
3. **Application Processing:** Testing student application submission and status tracking through the entire workflow.
4. **Provider Controls:** Confirming application filtering, reviewing, and decision functionality works correctly.
5. **Rating System:** Ensuring proper feedback submission, display, and administrative approval processes.

Project Conclusion

Objectives Achieved

Tadreeb successfully centralizes internship opportunities and enhances communication between stakeholders.

Functionality Verified

The testing plan ensures that key functions such as user registration, internship opportunity posting, and application management will be thoroughly validated once the system is implemented

Quality Ensured

The rating system promotes continuous improvement through structured feedback mechanisms.

Future Growth

Platform is positioned for expansion to additional universities and training providers.

The Tadreeb platform effectively bridges academia and industry by providing a transparent, secure internship ecosystem. Its user-friendly interface simplifies the entire internship lifecycle for all stakeholders.

Q&A

We now open the floor to questions and discussion. Please feel free to ask about any aspect of the Tadreeb platform, its features, benefits.
